30.03.2016	Damian Kaczmarek	0.9	Document creation.

## 1. Product description and requirements

---

Standard Audit File in SAP is an original product, prepared by SNP, which supports users in preparing SAF (Standard Audit Files) directly in SAP ERP system, along with generating the declaration in .XML format, enabling electronic dispatch of the declaration.

The solution allows individual and collective generation of listed structures:

- Structure 1 – g/l accounts,
- Structure 2 – bank statements,
- Structure 3 – warehouse,
- Structure 4 – VAT registry,
- Structure 5 – invoices,
- Structure 6 – revenue and expense ledger,
- Structure 7 – registry income.

### 1.1. Technical requirements

---

Component	Recommended version
Kernel	6.0

### 1.2. Package Contents

---

BCC product is prepared in a separate namespace /BCC/JPK. Transports containing a complete tool ready to test all processes offered by the product are delivered to the Customer Administrators Team. Any additional needs can be satisfied by using the BAdI extensions or by changes to standard program, agreed and implemented by SNP. The default configuration allows data analyzing from SAP tables and reading data previously saved using a program. It is possible to extend functionality to support data imported from other systems.

**The tool includes the following transactions:**

Transaction ID	Description of the transaction
/n/BCC/JPK	SAF Files - single generation
/n/BCC/JPKZ	Collective generation of SAF Files
/n/BCC/JPKV	SAF - Default variant
/n/BCC/JPKR	SAF - Reports
/n/BCC/JPKC	SAF - Configuration (including the reports structuring)
/n/BCC/JPKRC	SAF - Reports configuration
/n/BCC/JPKA	SAF Files Management
/n/BCC/JPKF	Default JPK saving directory

### 1.3. Update to version 3.0

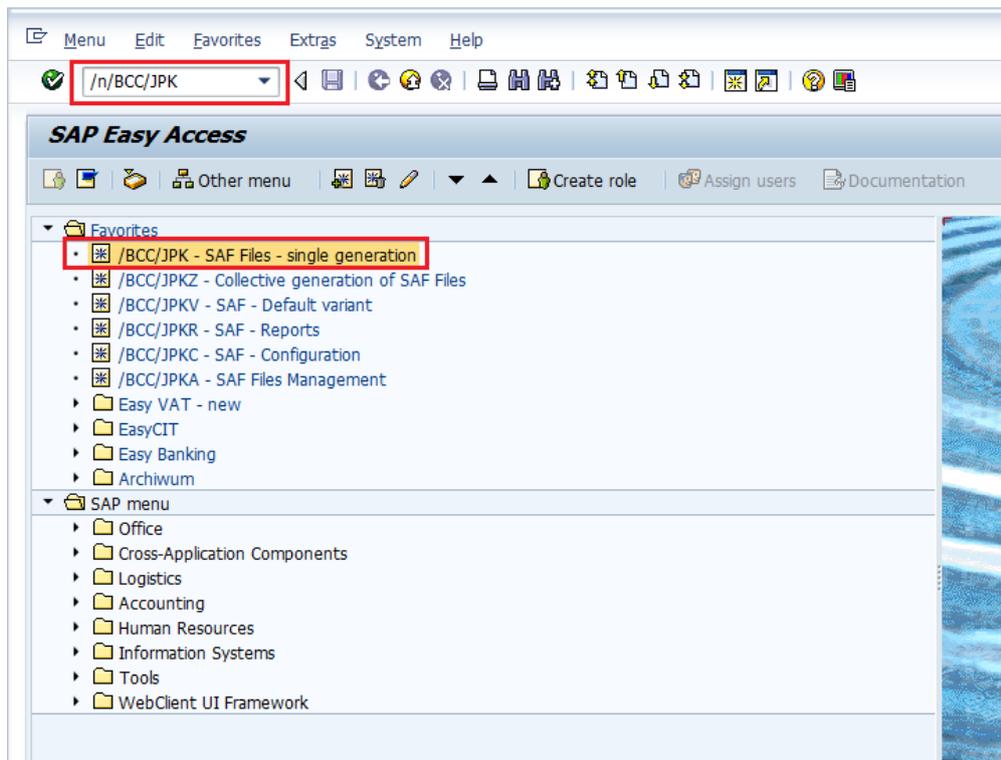

---

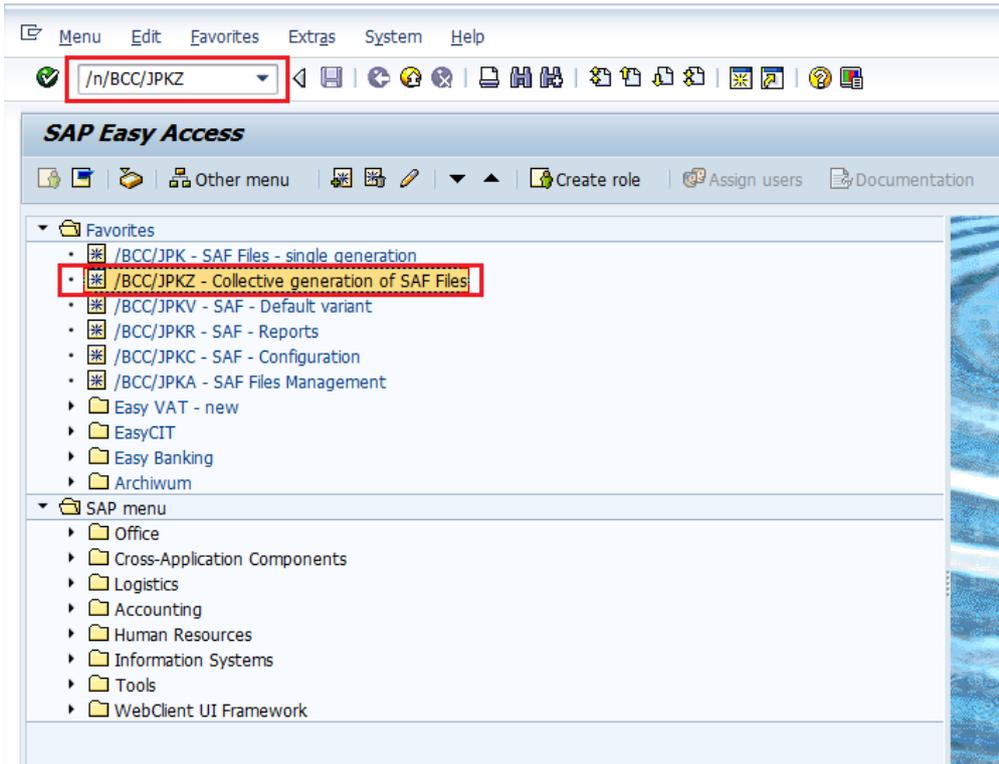

Version 3.0 contains new features and bug fixes. Improvements are implemented as additional options and they may be activated by JPK configuration. This way of activation allows to keep previously created modifications or customizations.

## 2. Transactions and programs

---

To use the product, initiate transaction `/BCC/JPK` (`/BCC/JPKZ`) by typing `/n/BCC/JPK` (`/n/BCC/JPKZ`) in the transaction direct initiation field, or select a transaction from the user role menu.

## 2.1. Executing a single SAF file generation

Transaction ID	Description of the transaction
/BCC/JPK	SAF Files – single generation

**Screen 1 - Header**

Field name	Field Description	User action and value	Comment
Company Code	Company Code selection for which we want to generate SAF files	Selection from the list / Manual entry	Eg. PL01
Date (from)	Specifying the first day of the period for which we want to generate SAF files	Selection from the list / Manual entry	Eg. 01.01.2016
Date (to)	Specifying the last day of the period for which we want to generate SAF files	Selection from the list / Manual entry	Eg. 31.01.2016
Version	Specifying the SAF version number (by specifying the SAF version we are able to generate different versions of SAF files for the same periods, with parameters selected by us)	Manual entry	Eg. 1  Specifying next numbers of version creates new data base. User may access to this database in the future. Reuse of number, cause overwrite of the database.
Creation date	Specifying the creation date of SAF files (by default today)	Selection from the list / Manual entry	Eg. 31.01.2016

**Screen 2 – Selection of task**

Field name	Field Description	User action and value	Comment
Documents analysis	Documents analysis for chosen period and Company Code (in order to generate the SAF files)	Selection	-----
Read data from DB	Read of the data stored in the database tables (data stored after previously conducted Documents analysis for a given period and Company Code)	Selection from the list	Ability to read stored data, edit the data, re-write in the database table, generate the SAF file, block the data and archive the data
Read JPK from archives	Read of the data stored in the archive (data archived after previously conducted Documents analysis for a given period and Company Code)	Selection from the list	Ability only to read the archived data and generate the SAF file
Data addr. – log analysis	Selecting the conditional analysis of log of changes (address data) on Counterparty	Checking/ Unchecking of checkbox	Selecting checkbox with data log analysis may significantly extend time of data generation

**Screen 3 - Specifying the parameters for the given SAF file (for Documents analysis)**

- **G/L Accounts**

The screenshot shows the SAP configuration screen for 'JPK = SAF - Standard Audit File'. The title bar includes 'Program Edit Goto System Help'. The main area contains the following fields and options:

- Company Code:** Y001
- Date (from):** 01.01.2016
- Date (to):** 31.12.2016
- JPK file version:** 1
- JPK file creation date:** 06.02.2016
- Analysis Options:**
  - Documents analysis
  - Read data from DB (with 'DB files' button)
  - Read JPK from archives (with 'Backu.files' button)
  - Data addr.-log analysis

At the bottom, there are tabs for 'G/L Accounts', 'Bank statements', 'Warehouse', 'VAT registry', 'Invoices', 'Rev&Ex.Le', and 'Registry income'. The 'G/L Accounts' tab is active, showing fields for 'G/L Account' and 'to' with empty input boxes and a search icon. Below these are several unchecked checkboxes:

- New general ledger
- Read data from BKPF/BSEG table
- Omission reversed doc. 'red'
- Omission acc. KG with bal.zero
- Read BO begin.financial year

Field name	Field Description	User action and value	Comment
G/L Account	Selecting the range (from - to) of Ledger accounts, which are to be analyzed	Selection from the list / Manual entry	Eg. 403000 to 403999  By default, these fields should remain empty for the analysis of documents for all accounts
Read data from BKPF/BSEG tables	Selecting the read of data from BKPF/BSEG tables	Checking/ Unchecking of checkbox	-----
Omission of G/L accounts with the balance of zero	Selecting of omission of G/L accounts with the balance of zero (data from these accounts will not be analyzed)	Checking/ Unchecking of checkbox	-----
Omission of reversed doc. 'red'	Omission of reversed documents 'red' (data from these documents will not be analyzed)	Checking/ Unchecking of checkbox	Not selecting the checkbox will cause that red-ink entry will be moved from DT to CT (or CT to DT)
New ledger	Selecting of new ledger allows to generate date from new ledger – parallel and subledger.	Checking/ Unchecking of checkbox	-----
Read OB begin.financial year	Possibility to choose whether to present OB of the selected period or of OB	Checking/ Unchecking of checkbox	On the analysis screen user, will see both OB (Financial and period) but only one will be transferred to XML file.

**Option on selection screen**

1. Generating data form New Ledger – parallel and subledgers. On the screen below new fields are presented that need to be filled to generate data form the new ledger.

**JPK = SAF - Standard Audit File**

Company Code: Y001  
 Date (from): 01.01.2016 Date (to): 31.12.2016  
 JPK file version: 1  
 JPK file creation date: 06.02.2016

Documents analysis  
 Read data from DB (DB files)  
 Read JPK from archives (Backu.files)  
 Data addr.-log analysis

G/L Accounts | Bank statements | Warehouse | VAT registry | Invoices | Rev&Ex.Le | Registry income

G/L Account: [ ] to [ ]

New general ledger  
 Ledger: 01  
 Record Type: 0

Omission acc. KG with bal.zero  
 Read BO begin.financial year

2. Analysis of reversed doc. "red" . Selecting as presented below **[1]**:

**JPK = SAF - Standard Audit File**

Company Code: Y001  
 Date (from): 01.01.2016 Date (to): 31.12.2016  
 JPK file version: 1  
 JPK file creation date: 06.02.2016

Documents analysis  
 Read data from DB (DB files)  
 Read JPK from archives (Backu.files)  
 Data addr.-log analysis

G/L Accounts | Bank statements | Warehouse | VAT registry | Invoices | Rev&Ex.Le | Registry income

G/L Account: [ ] to [ ]

New general ledger  
 Read data from BKPF/BSEG table  
 Omission reversed doc. 'red' **[1]**  
 Omission acc. KG with bal.zero  
 Read BO begin.financial year

**Effect of using reversed doc. "red" checkbox.**

Selecting the checkbox will reflect the proper accounting records. Not selecting will cause transfer from DT to CT with opposite sign (or CT to DT).

**Example:**

Selected items in frames are presenting the way of using reversed doc. "red"

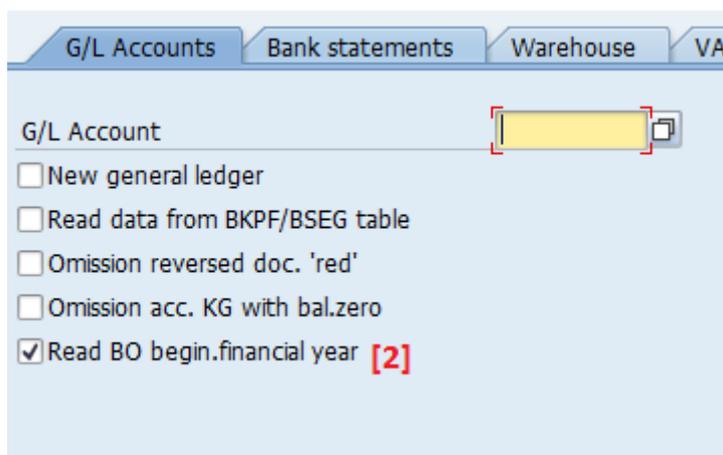

**Selecting checkbox – proper presentation of account balances**

- Option to choose whether to present OB (opening balance) of the selected period or OB of financial year. On the analysis screen user will see both OB (Financial and period) but only one will be transferred to XML file. Selecting as presented below [2]:

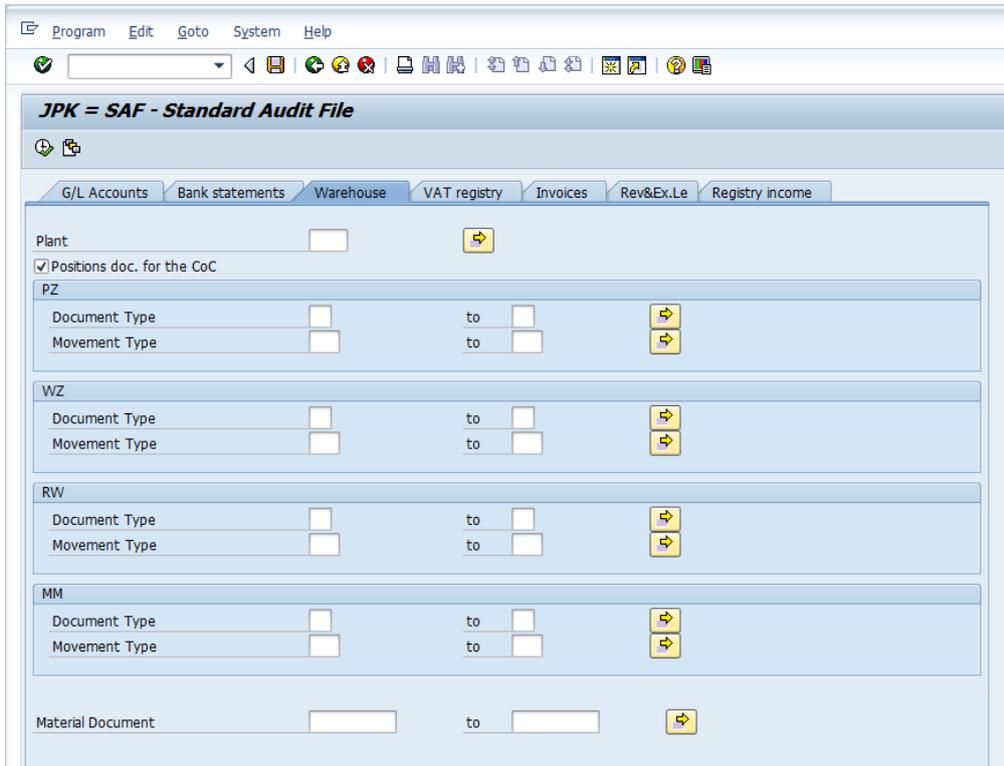

- **Bank statements**

Field name	Field Description	User action and value	Comment
House Bank	Selecting the range (from - to) of House Banks, which are to be analyzed	Selection from the list / Manual entry	-----
Account ID	Selecting the range (from - to) of Account ID's, which are to be analyzed	Selection from the list / Manual entry	-----
G/L Account	Selecting the range (from - to) of G/L Accounts, which are to be analyzed	Selection from the list / Manual entry	-----

In the case of bank statements, a single file is generated for each bank account.

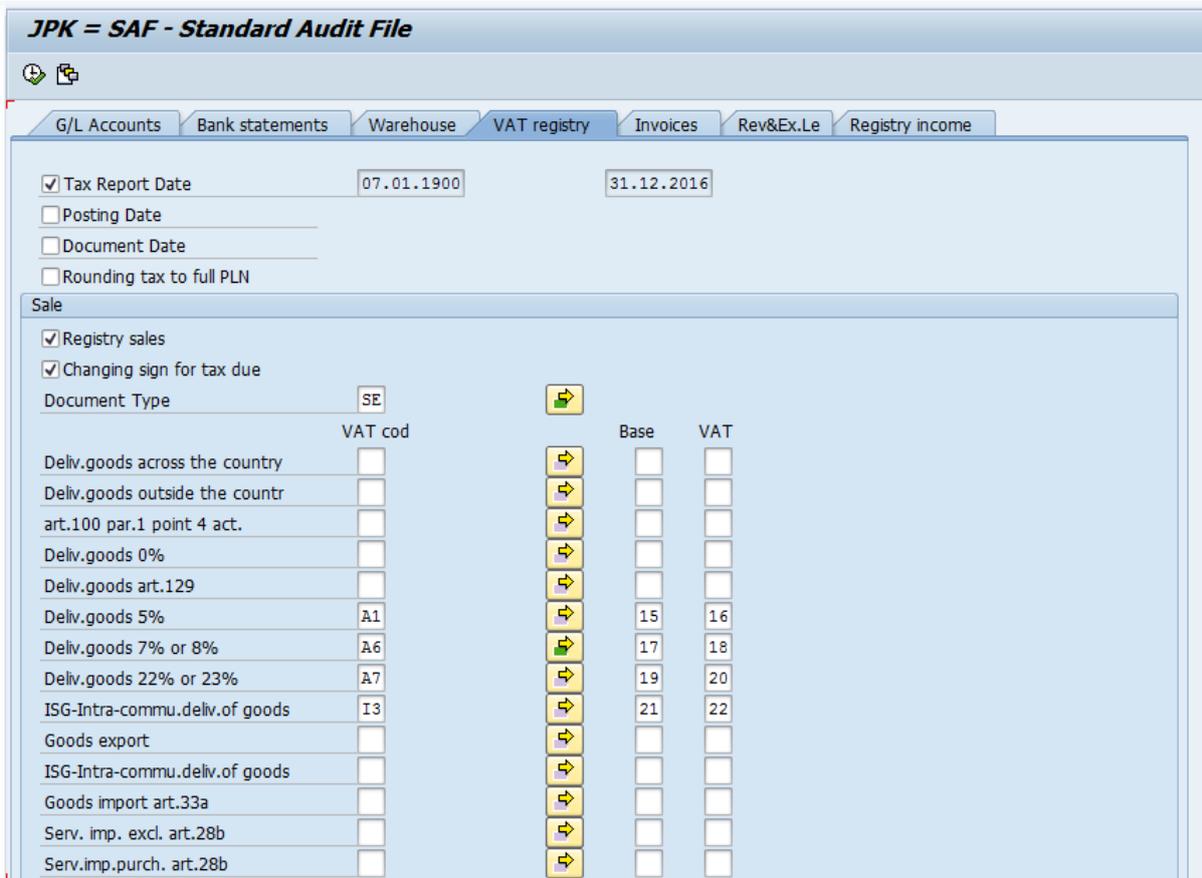

• Warehouse

Field name	Field Description	User action and value	Comment
Plant	The choice of Plant / Plants, for which analysis of the line items / material documents will be carried out	Select from the list / Manual entry	-----
Positions doc. For the CoC	The choice of generating warehouse documents only for entered Company Code (if unchecked, the SAF file is generated for all Company Codes)	Select/ Deselect checkbox	-----
PZ WZ RW MM	<p>PZ – Receipt from the outside, Goods received note</p> <p>WZ – External release, Goods Issue note or stock issue confirmation</p> <p>RW – Internal usage/expenditure</p> <p>MM – Inhouse movement or internal goods transfer note</p> <p><b>Comment:</b></p> <p>For each document you need to specify Movement Type. Depends on program configuration, Document Types may be optional or obligatory selection.</p>	-----	-----
Document type	Selecting the range (from - to) of Document types, which are to be analyzed	Selection from the list / Manual entry	Selecting or eliminating of specific doc types

Movement type	Selecting the range (from - to) of Movement types, which are to be analyzed	Selection from the list / Manual entry	Selecting or eliminating of specific doc types
Material Document	Specifying the range (from - to) of Material Documents, which are to be analyzed	Manual entry	Selecting or eliminating of specific doc types

- VAT registry

- User should choose whether to perform an analysis based on Tax Reporting Date, Posting Date or Document Date (option to specify time intervals from - to)
- The option to choose conditional rounding of values for input/due tax in accordance to the requirements of the Ministry of Finance (selected by default on the selection screen)
- Registry sales (selected by default) - enables the presentation / generation of data for output tax
- Registry purchases (selected by default) - enables the presentation / generation of data for input tax
- Option to choose conditional sign change for positions assigned to the tax due
- Define the Type/Types of Documents (optional)
- For each position of VAT settlement form, assign the VAT code.

In order to properly present the data in the output SAF file, user should also specify the base field or VAT amount (depending on the requirements of the Ministry of Finance, following VAT-7 declaration).

**Example:**

For VAT settlement position: 'Deliv. goods 5%', the VAT code 'A1' is assigned. The base value should be placed in the field number '15' of VAT-7 declaration, while the VAT amount value should be placed in the field number '16'. On this basis, the value of the Base and VAT, will be placed in the appropriate fields of SAF file.

All fields for base and tax amount should be filled in that way.

- Customer – enables restriction of data for the selected customer/customers
- Vendor – enables restriction of data for the selected vendor/vendors
- Specify the range (from - to) of Documents Numbers, which are to be analyzed or be excluded

- Invoices

- An analyze can be performed based on Posting Date, VAT Date, or the Document Date (the ability to specify time intervals from - to)
- Currency - allows to specify the currency code to limit selection results
- Sales invoices (selected by default) - enables the presentation / generation of data for sales invoices
- Purchase invoices (selected by default) - enables the presentation / generation of data for purchase invoices
- Option to choose conditional change of sign for sales invoices

- Option to remove foreign VAT registration numbers from the file (NIP – omission <> PL)
  - For Sale Invoices – determine the Type/Types of FI Documents and Type/Types of SD Invoices - also corrective
  - FI Documents take precedence over SD Invoices (documents from FI area are read first).
  - Define the price conditions for the calculation of the base price and tax - program reads which base price condition is current. It is required to determine both conditions for the proper calculation of discounts and rebates.
  - For each VAT rate, define the VAT code (as in the VAT registry case)
  - Customer – enables restriction of data for the selected customers
  - Vendor – enables restriction of data for the selected vendors
  - Reverse charge – by entering the VAT code in the Reserve 1 or Reserve 2 field and checking the appropriate checkbox 'Reverse charge', all documents having the selected tax code (entered in the appropriate Reserve field) in the resulting SAF file will be marked with 'Rc' symbol (Reverse charge) and will have additionally presented net and tax amounts related to reverse charge
  - Specify the range (from - to) of documents numbers, which are to be analyzed
- **Revenue and Expense Ledger**

- After selecting the Documents analysis, we have the option to edit Company Code data
- In the Tax office field enter the code of company tax office (relevant for all the structures, except VAT)
- SAF Correction – distinguish files issued for the first time from corrections
- In the Inf. text enter a comment to describe generated/saved files in the system

Field name	Field Description	User action and value	Comment
Back (F5)	Return to the selection screen.	Selection	-----
Save to DB (F8)	Storage of analyzed data in database table (ability to read and edit data and to generate SAF file through function Read data from DB)	Selection	-----
Export to JPK file (F6)	After selecting that function, SAP will ask to enter a location on your local disk where you want to save the generated XML file.	Selection	-----
Archiving (F7)	Saving of analyzed data in archive. SAP will remove the data from database table and save the file in archive - no possibility of later editing, the ability to read the archived data and generate SAF file through function Read SAF from archive	Selection	Archiving functionality need to be configured by administrator. Please refer to Administrator Manual.
Lock (SHIFT + F6)	Locking changes to the file (Shift + F6). Data will be locked to change when user will press XML generation or when user manually lock generated data. Please note that only users with correct permissions may have access to this functionality.	Selection	-----
Positions (SHIFT + F11)	View all the line items on second structure level.	Selection	-----
Activity logs (SHIFT + F1)	Overview of processes made for given JPK file (for given range of dates and version of JPK file)	Selection	-----
Valid. XML (SHIFT + F12)	The validation of JPK file data (maturity of fields, dictionary data check, relationships between the fields)	Selection	-----
Download JPK (CTRL +SHIFT+ F1)	Read and add other JPK databases to active selection	Selection	
Assigned JPK (CTRL+SHIFT +F2)	Gives the information about JPK databases when more than one database is displayed (e.g merged files)	Selection	
Downl. file (CTRL +F1)	Add data from Excel or txt file	Selection	Function active with Excel4JPK program installed
JPK rep. (CTRL+SHIFT +F4)	Display report on active database	Selection	It is necessary to save the data before displaying report

- By selecting Positions button (SHIFT + F11) or double-click on the selected G/L account line, there is an option to display all line items of its component (G/L Accounts)

**SAF Files - G/L Accounts**

- VAT structure may be configured as flat (one level) structure or two levels structure. Flat structure is recommended and is preconfigured for new program installations.

- Invoices structure displays sales documents on the first level and invoices positions on the second level.

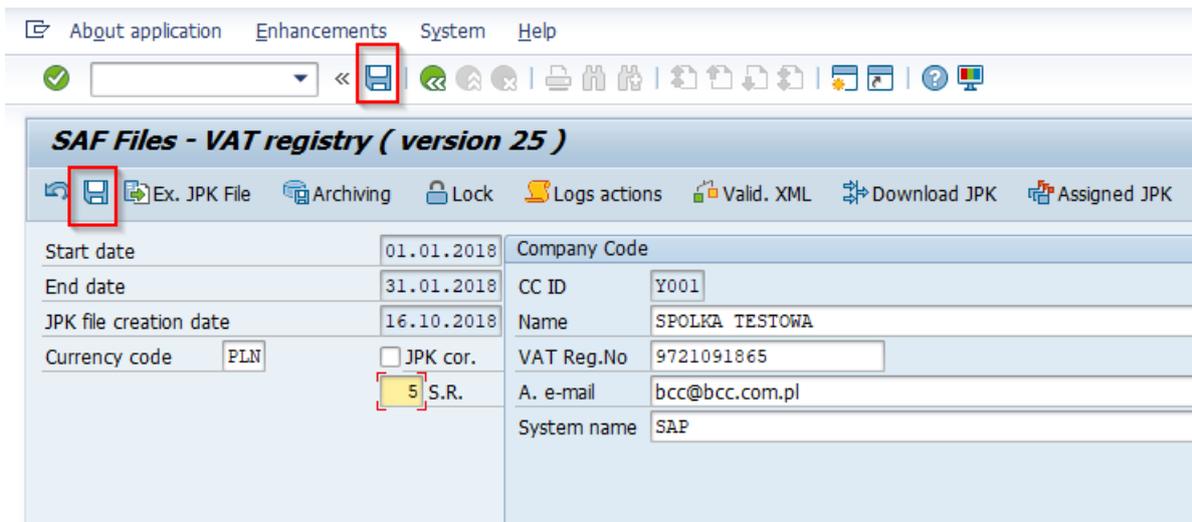

### 2.3. Saving selection to database

Transaction ID	Description of the transaction
/BCC/JPK	SAF Files – single generation

Data selected and approved in analysis step, should be saved to JPK database. Saved databases are by default locked for edition. XML files are generated based on saved selections.

In order to save the database, select one of the buttons from the menu.

## 2.4. Creating XML file

Transaction ID	Description of the transaction
/BCC/JPK	SAF Files – single generation

XML file is created based on saved or archived database.

In order to create an XML file choose button Export JPK File:

**SAF Files - VAT registry ( version 25 )**

Start date	01.01.2018	Company Code	
End date	31.01.2018	CC ID	Y001
JPK file creation date	16.10.2018	Name	SPOLKA TESTOWA
Currency code	PLN	VAT Reg.No	9721091865
	<input type="checkbox"/> JPK cor.	A. e-mail	bcc@bcc.com.pl
	5 S.R.	System name	SAP

In the pop-up window choose file path to save the file. Based on the configuration settings, path may be preconfigured and option to change the path is not available.

SAF Files - VAT registry ( version 25 )

Company Code: Y001  
 JPK file typ: VAT  
 Catalog: \\server\JPK\VAT  
 Unix:   
 The test file (loc):   
 Local directory:

It is possible to create test file in any location.

SAF Files - VAT registry ( version 25 )

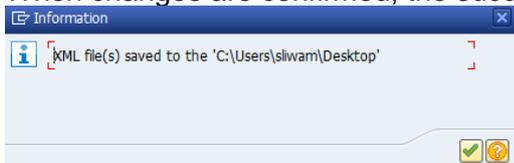

Company Code: Y001  
 JPK file typ: VAT  
 Catalog: \\server\JPK\VAT  
 Unix:   
 The test file (loc):  Note: test file stored in local directory can not be sent to tax office  
 Local directory: C:\Users\user\Desktop

In VAT structure, new pop-up appears while saving the file. User should confirm the number of file version that should be assigned to the new XML file. Every sent file concerning the same reporting period should get the next number in ascending order. System will suggest the version but user should confirm or changed it based on the actual number of files sent to Ministry of Finance.

The file generated for the first time should be numbered 0.

When changes are confirmed, the success message appears.

## 2.5. Executing a collective file generation

Transaction ID	Description of the transaction
/BCC/JPKZ	Collective generation of SAF Files

Depending on the program configuration, first transaction screen may contain file type selection where required structure should be chosen.

When above menu is not available, the structure is chosen by checkbox selection.

Program Edit Goto System Help

/n/BCC/JPKZ

**Screen 2 - Header**

Field name	Field Description	User action and value	Comment
------------	-------------------	-----------------------	---------

Company Code	Company Code selection for which we want to generate SAF files	Selection from the list / Manual entry	Eg. PL01
Date (from)	Specifying the first day of the period for which we want to generate SAF files	Selection from the list / Manual entry	Eg. 01.01.2016
Date (to)	Specifying the last day of the period for which we want to generate SAF files	Selection from the list / Manual entry	Eg. 31.01.2016
Creation date	Specifying the creation date of SAF files (by default today)	Selection from the list / Manual entry	Eg. 31.01.2016
Data addr. – log analysis	Selecting the conditional analysis of log of changes (address data) on Counterparty	Checking/ Unchecking of checkbox	Selecting checkbox with data log analysis may significantly extend time of data generation

### **Screen 2 - Selection of SAF files, that you want to generate**

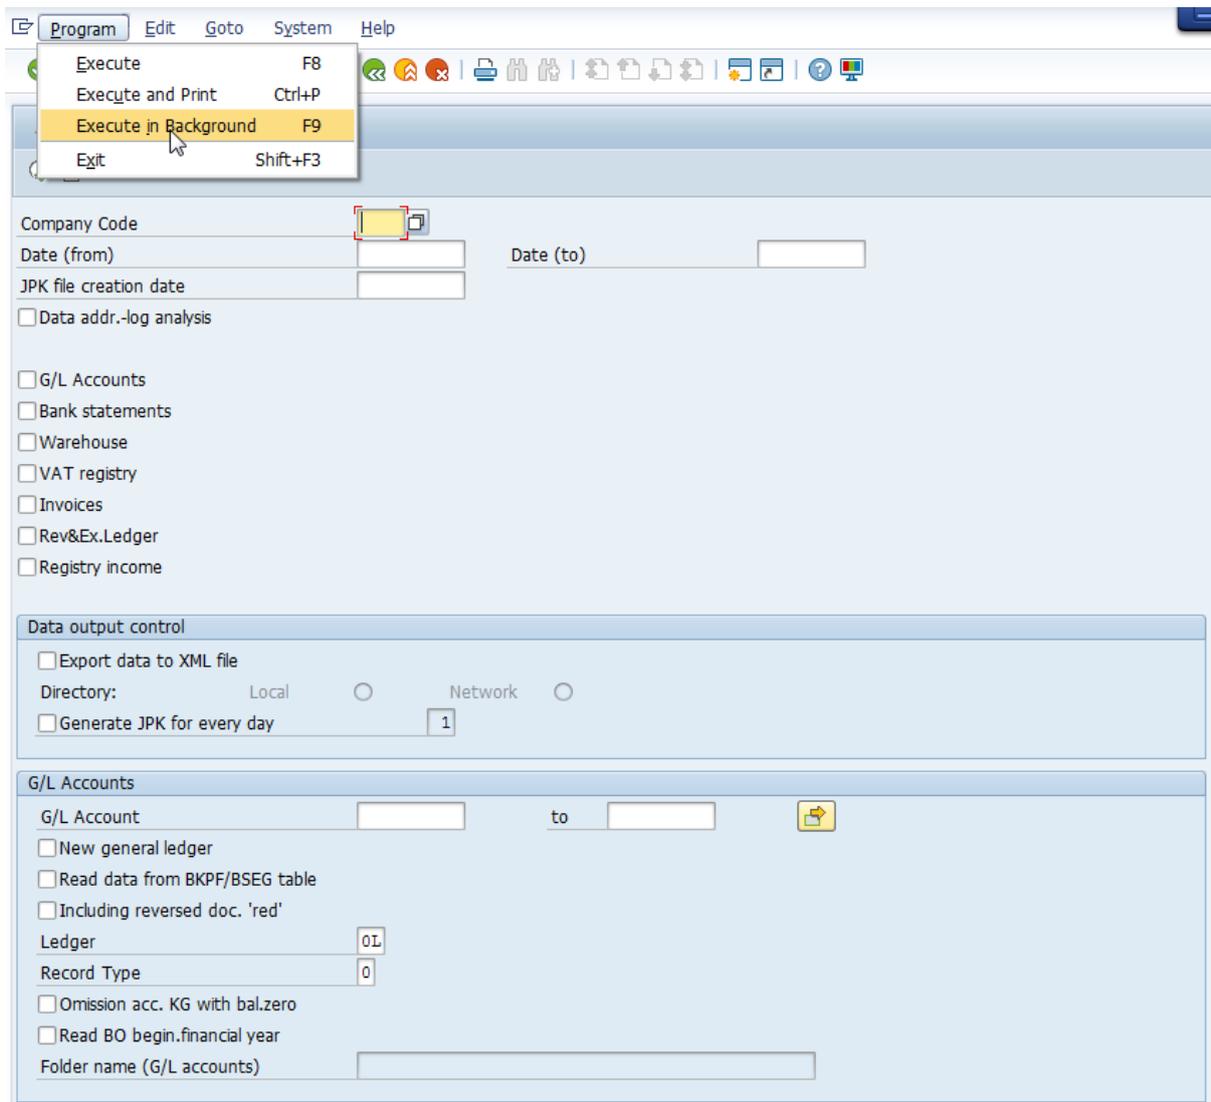

- G/L Accounts,
- Bank statements,
- Warehouse,
- VAT registry,
- Invoices,
- Revenue and Expense Ledger,
- Registry income.

### **Screen 3 - Control data output**

Field name	Field Description	User action and value	Comment
Export data to XML file	Generating an XML files for the selected structures.	Selection	Selecting the storage directory: local or network
Generate SAF for every day	Generating a SAF files for the selected structures separately for each day of the selected period (the ability to specify the number of days, for which separate files will be generated - eg. 5 days).	Selection	-----

- Further parameters for particular types of SAF files are determined in the same way as when generating the single SAF file in /BCC/JPK transaction.
- The difference lies in selecting file storage space on your local drive (Folder name) for each type of SAF (possibility of selecting different locations for different types of SAF files).
- Collective generating of SAF files allows you only to generate files; transaction itself doesn't have capability to view generated/saved files. To do it, you need to use the first transaction (/BCC/JPK).

- Collective generating of SAF files have the option to generate files in the background (for the program run in the background, in transaction SM36 we are able to preview the list of completed processes).

**After selecting a SAF files that we want to generate, specifying required parameters and choosing the storage location:**

**Press:** F8 Execute (or choose Execute icon)

## 2.6. Tips & Tricks

1. Both transactions have the option to read Variants of value selection (templates) on the selection screen.
2. The variants are created by filling in the appropriate data fields of the SAF file/files for which you want to create a variant (save the entered values in the form of variant / template for later use), and then selecting the save icon (or use Ctrl + S combination).

Selection Scrms	Field name	Type	Protect field	Hide field	Hide field 'BIS'	Save field without values	Switch GPA off	Required field	Selection variable	Option	Name of Variable (Inp)
1.000	Company Code	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>			
1.000	Date (from)	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>			
1.000	Date (to)	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>			
1.000	P_WERJPK	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>			
1.000	JPK file creation date	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>			
1.000	Documents analysis	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>			
1.000	Read data from DB	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>			
1.000	Read JPK from archives	P	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>			
1.100	G/L Account	S	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>			

3. Program checks whether the user has permissions for the selected Company code and the type of SAF file for which wants to generate an XML file. After generating the data additional

checks for permissions are made for all the functionalities (saving/export/archiving/blocking/line items etc.).

Please refer to Administrator Manual for description of user permissions.

4. There is a possibility of entering additional parameters/fields allowing to read specific documents (selection screen). The details of this process are included in the Administrator manual.

### 3. SAF – Reports (JPK reports)

Transaction ID	Description of the transaction
/BCC/JPKR	SAF - Reports

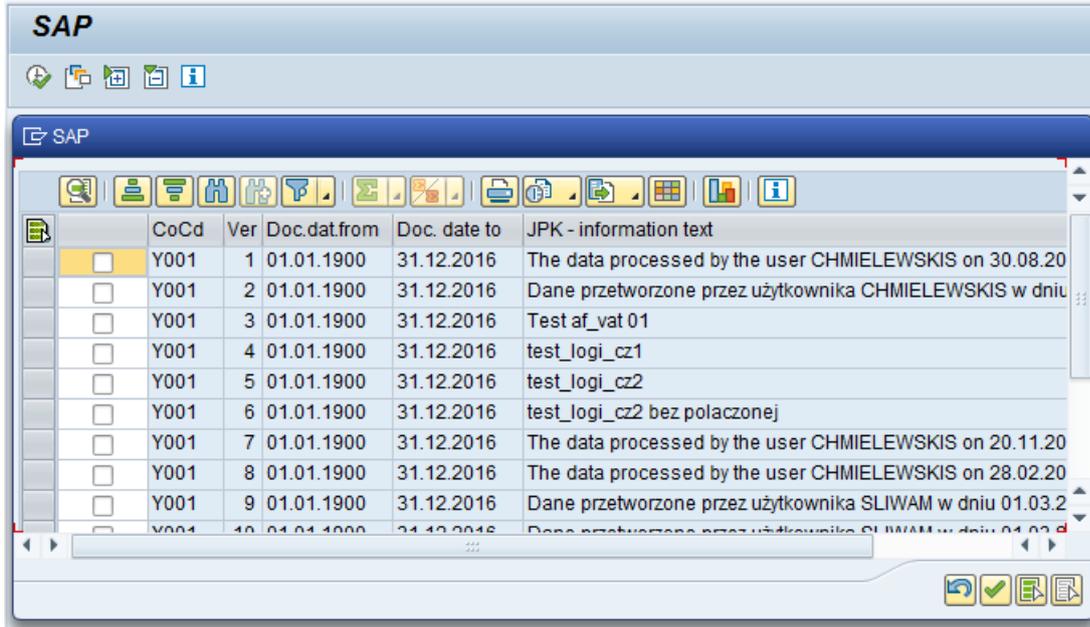

JPK Report transaction allows user to review and verify aggregated data that was previously extracted by main JPK transaction. Then it could be compared with the standard SAP transaction. There are several predefined reports created by us with some simple aggregation. Those reports should be used as samples and could be adjusted to company needs.

The customizing of the reports in JPK version 3.0 was moved to dedicated transaction (JPKRC).

In the following paragraph we have presented the customizing of the VAT reporting.

- JPK Reports transaction (/n/bcc/JPKR) allows to review the reports generated by standard JPK transaction, there are two main types of reports
  - Based on the structures – tables visible in main transactions
  - Based on XML file generated by the program
- The reports are created based on structures of SAF files, i.e. for specific type of SAF file, Company code and period
- Specify Company code/codes for which you want to preview the list of generated reports.
- Specify the document dates (range from - to) for which you want to preview the list of generated reports.
- Additionally, choose a SAF report ID, for which you want to preview the list of generated reports.

**Press:** F8 Execute (or choose Execute icon)

Please select the file version that you want to review and then select acceptance icon or press F6.

On the next screen there the report will be presented.

**JPK Raport - VAT - pozycje deklaracji (Podstawa, VAT) (nowe)**

The buttons above the table allows to sort, filter, summarize data, export the data to a local file, change the display etc.

In version 3.0 we added the possibility to create additional summary lines – the customizing is described in the customizing JPKRC section. In the screen shot presented above we added 3 lines with tax due, accrued and the difference between them.

We have created the possibility to use reports also on the main screen of the JPK files, please go to basic transaction (/n/BCC/JPK), select or generate a JPK data, then save it to the database (or create XML – for reports based on XML) and then click on the reports button:

In case of missing button please activate it using parameter BT\_JP2.

#### 4. SAF reports – configuration

Transaction ID	Description
/BCC/JPKRC	SAF reports - configuration

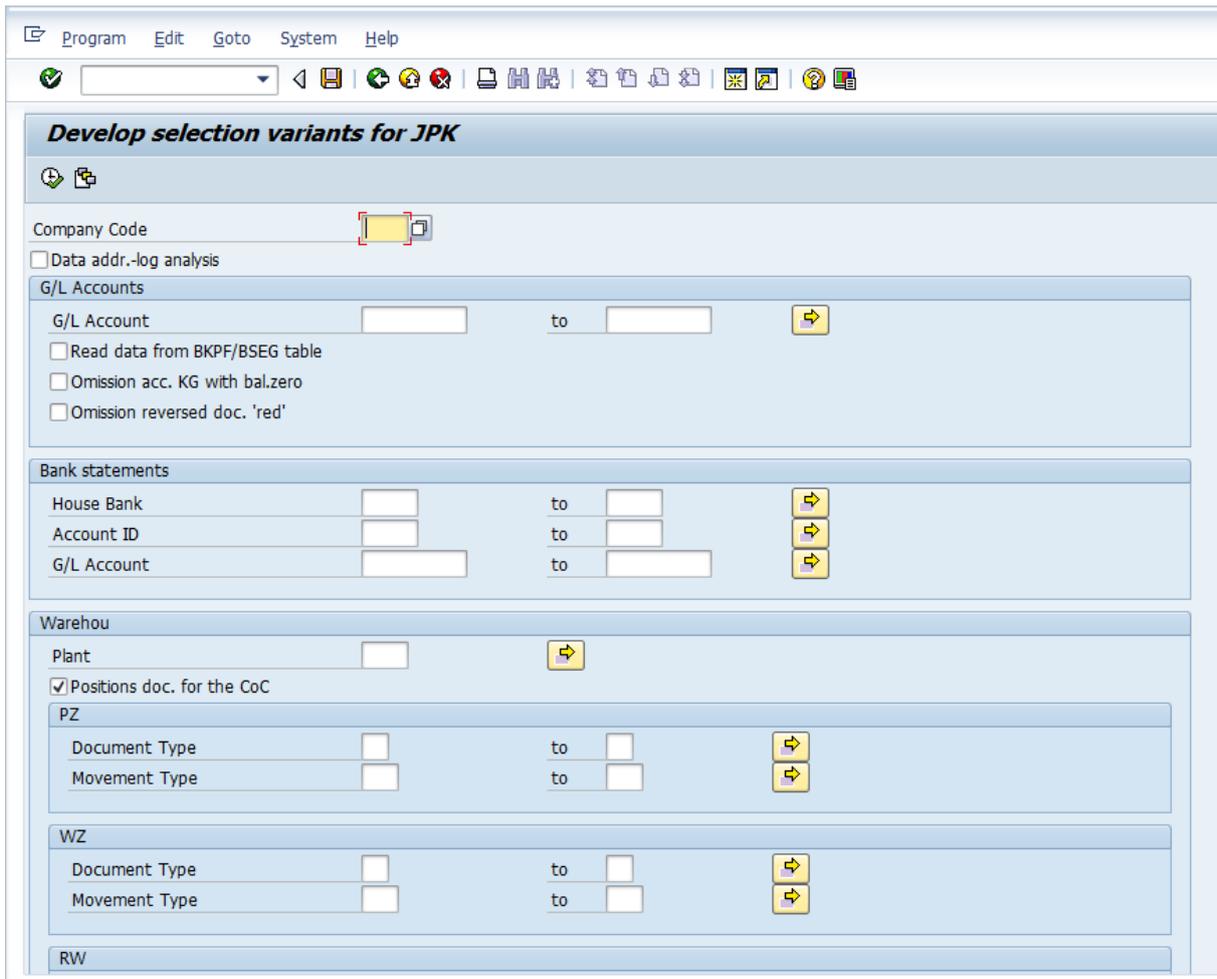

In JPK version 3.0 we have moved customizing of the reports to dedicated transaction /n/BCC/JPKRC

Information how to prepare or configure new reports are available in Administrator Manual.

#### 5. SAF - Default variant

Transaction ID	Description
/BCC/JPKV	SAF – Default variant

- Transaction allows to specify default parameters, that will be read automatically during transactions run for SAF files generation
- Using the variant transaction (saving default variant) has higher priority than variants saved in the transaction. However, user can still load their own variants in JPK transactions.
- Defined default variant is loaded at startup of transactions for single and collective SAF file generation
- This allows to obtain consistency of data generated by these transactions, and saves time
- In the particular fields introduce data, analogously to filling out the fields in the SAF file generation

**Press:** F8 Execute (or choose Execute icon)

## 6. Merging files – transaction JPKM

Transaction ID	Description
/BCC/JPKM	JPK – merge settlements

The JPKM transaction allows to merge two or more JPK databases into one file. Transaction works with structure:

- VAT
- Invoices
- Warehouse

**JPK - Merge settlements**

About application

Company Code: Y001  
 Date from: 01.06.2018 Date to: 30.06.2018  
 JPK file creation date: 16.10.2018  
 JPK file type: VAT

Correction JPK

**Registry VAT**

Rounding tax to full PLN

Data for all periods

Buttons: Dodaj, Usuń p., Usuń w.

Co...	Doc.dat.from	Doc. date to	V...	JPK - information text
Y...	01.06.2018	30.06.2018	1	Dane przetworzone przez użytkownika CHMIELEWSKIS w dniu 27.09.2017 o godz. 15:05:58 (opis możliwy do zmiany przez użytkownika)
Y001	01.06.2018	30.06.2018	2	Test KoreckID

User should select existing databases to merge by using the button Add (Dodaj). The ready file will be stored in database and in given location (if option export file is selected).

Newly created files can be open in and view in basic JPK transaction. Log of changes will contain information about file being merged.
